Re: SEQRA
Proposed Redevelopment/Former Hudson River Psychiatric Hospital
Poughkeepsie, Dutchess County
15PR

Dear Supervisor Tancredi:

I am writing as a follow up to the recent site visit made by staff from the Office of Parks, Recreation and Historic Preservation's Division for Historic Preservation (OPRHP) to the former Hudson River Psychiatric Hospital.

During this site visit and on previous occasions our staff met with members of the development team and local officials to tour various sections of the facility. It was our goal to obtain a better understanding of the current conditions of the buildings on the campus and the redevelopment plan. The information gathered was intended to help us provide the local Lead Agency, under the State Environmental Quality Review Act, with substantive comments in a timely manner once the formal environmental review begins.

In an effort to ensure timely and comprehensive comments from this office we are submitting preliminary information to you now so that the Lead Agency can expand on some of the open sections found in the 2009 (or subsequent) Final Scoping Document for the project.

As you are undoubtedly aware, the core of the complex was given the Nation's highest preservation status when it named as a National Historic Landmark (NHL) in 1989. This designation by the National Park Service included within its boundary the central Administration Building (Bld. 51¹), including the north and south flanking patient wings and the connected service wings to the east.

This section or core of the complex was found to be of National significance for its association with one of the country's leading late 19th century architects, Frederick Clarke Withers. Considered to be one of his most significant commissions the main building complex epitomizes the High Victorian Gothic style of architecture in the United States. The complex is also

¹ Building numbers relate to the 1991 OPRHP Determination of National Register of Historic Places Eligibility maps entitled "Key Plot Plan, Hudson River State Hospital, Poughkeepsie, New York, which are enclosed with this letter.

significant as an exceptional example of the theories regarding hospital design for the treatment of mentally ill individuals as developed and promoted by Dr. Thomas Kirkbride. Lastly, the Landmark portion of the facility was also recognized for its landscape, which was designed by Calvert Vaux and Frederic Law Olmstead.

Within the boundary of the designated NHL but identified in 1989 as *non-contributing* to this highest level of designation are the Bus Terminal (Bld. 36), Plant Facilities (Bld. 40), Firehouse/Recreation Offices (Bld. 41), Blacksmith Shop (Bld. 42), Carpenter/Machine Shop (Bld. 43), Outdoor Pavilions (Bld. 44 & 46), Mortuary/Laboratory (Bld. 45), Laundry/Tailor Shop (Bld. 50) and a Refreshment Stand (Bld. 166).

As you know the Type I list in the SEQRA regulations states in part, "*any Unlisted action (unless the action is designed for the preservation of the facility or site) occurring wholly or partially within, or substantially contiguous to, any historic building, structure, facility, site or district or prehistoric site that is listed on the National Register of Historic Places, or that has been proposed by the New York State Board on Historic Preservation for a recommendation to the State Historic Preservation Officer for nomination for inclusion in the National Register, or that is listed on the State Register of Historic Places*" (9 NYCRR §617.4[9]). This definition clearly includes the National Historic Landmark portion of the complex and in our opinion the larger hospital complex district (as defined by a 1991 site survey referenced below) based on the immediacy and historic interconnection of the buildings. We would recommend that this area and the involved buildings be included in your "hard look" at potential impacts to historic/cultural resources under SEQRA.

In addition to the SEQRA review for this action we would anticipate that a project of this scale would require or involve some level of state and/or federal permitting or possibly funding. Such government actions require the involved state and/or federal agencies to undertake a substantive historic preservation review in accordance with either Section 14.09 (NYPRHPL) or Section 106 (NHPA). Under these statutes resources that are listed in or determined to be eligible for inclusion in the New York State and National Registers of Historic Places must be taken into consideration in the project planning process. We believe that it is important that any outcome of the SEQRA process must be in alignment with any future state or federal agency review. If not, future permits or funding could be jeopardized.

Regarding the National Register listed status of the various parts of the complex for the purposes of SEQRA and potential state and federal review we offer the following overview. In 1991 a number of former New York State Psychiatric Center complexes were designated for disposal by the state. As part of this process and to fulfill the involved agency's responsibilities under Section 14.09 of New York State Parks, Recreation and Historic Preservation Law (PRHPL) our office was asked to evaluate each of the facilities. (see 9 NYCRR §428.4.c) As a result our office undertook a more comprehensive evaluation of the former Hudson River Psychiatrist Hospital. Our assessment looked beyond what was found to be nationally significant as part of the National Park Service's 1989 assessment. We determined that the historic importance of the facility extended beyond the Wither's designed core and the assigned period of significance for the NHL, which extended from 1867 to 1886.

The 1991 assessment looked at a total of 123 resources associated with the former State Hospital not including the previously designated NHL (Bld. 51 complex). At this time our office found that there were two historic districts associated with the complex. The first included the NHL property as well as much of the surrounding components of the complex. It was defined as follows:

"In addition to the NHL designated main building, the district includes the following categories of significant contributing resources: 1) The nineteenth century support

buildings associated with Withers' original design for the hospital, 2) The intact remnants of the Olmsted designed landscape including the curvilinear road pattern, trees, and rolling, open topography that characterize the grounds surrounding the main building, 3) The later buildings dating to the turn-of-the-century and early twentieth century (pre-1941). Most of these buildings were constructed of brick, to complement the main building, and are historically significant for their association with the growth and development of the hospital during the early twentieth century. A number, including the library, pilgrim home, amusement hall, and Catholic chapel, are also architecturally significant as intact examples of the Colonial Revival, Classical Revival, and early English Gothic styles."

The second historic district was located east of the main hospital grounds and represented the expansion of the hospital complex in the early twentieth century. This complex of buildings includes Hillcrest, Cleveland home, Ross and a small cluster of buildings to the southwest of Hillcrest. A third area of building located west of US Route 9 and extending to the Hudson River was not assessed.

Within the boundary of the first historic district, which appears to be the focus of this project, we assessed the 90 additional buildings that were not part of the NHL (Bld. 51). Of these, 53 were noted as *contributing* to the district and 37 are *non-contributing* to the district. In the intervening 25 years since this survey was completed additional buildings that had once been identified as contributing have lost significant architectural integrity due to severe deterioration. Of the remaining contributing buildings (outside of the NHL structure) many are now isolated and surrounded by deteriorating non-contributing structures. While the history of the larger district and the innovations in mental health care associated with the Kirkbride plan campus survives, many if not all of the secondary and support structures appear to have reached the end of their service life. We regretfully agree with the development team that the buildings located to the east and northwest of the NHL administration core cannot be reasonably adapted for a modern use based on both fiscal and programmatic reasons. We also concur that the more modern 1960s hospital buildings located to the south of the NHL are of a scale that make reasonable private adaptive reuse impractical in this location.

With that stated, OPRHP is strongly committed to the protection and reasonable adaptive reuse of F. C. Withers' National Historic Landmark building. Having agreed that everything surrounding the NHL complex can be removed, thus establishing a clean slate for redevelopment, our office must insist on the inclusion of the Administration/Ward complex in any future redevelopment. We understand that the condition of the northern and southern wings pose a significant redevelopment challenge, but we are open to any discussion on how they might be reconstructed or how portions of them might be incorporated into a landscape plan. Similarly, the eastern wings have sufficient integrity for future redevelopment consideration. Any plan that would demolish these sections of the NHL would need to demonstrate that a thorough and conscientious effort to assess options had been undertaken by the development team.

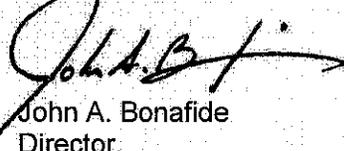

Regarding the central core of the NHL building, OPRHP must be clear in our comments that this structure must be adaptively reused utilizing the Secretary of the Interior's Standards for Rehabilitation in any development plan for the site.

In addition to the NHL portion of the property, our office also urges that the Superintendent's Residence (1904, Bld. 59), the Chapel (1906, Bld. 28), the Protestant Chapel (1925, Bld. 35), the Library (1910, Bld. 73), the Staff Residence (1932, Bld. 12), Amusement Hall (1905, Bld. 38) and the semi-intact Vaux/Olmstead landscape plan west of the NHL Administration complex be retained in any future redevelopment plan.

It is our belief that our recommendations as outlined above to the Lead Agency and any involved state or federal agencies are reasonable and balance historic preservation needs with those of the community and the development team.

Within the 6,000 National Register of Historic Places properties and districts found in New York State there are less than 260 National Historic Landmarks. It is within this most elite group of preeminent historic places that the former Hudson River State Hospital is recognized. I believe the Lead Agency, the involved state and federal agencies and this office would agree that such a distinction demands a creative and flexible solution that will allow the Landmark to survive and find a new, modern and productive use. If you should have any questions regarding our comments, please do not hesitate to contact me at (518) 268-2166.

Sincerely,

A handwritten signature in black ink, appearing to read "John A. Bonafide", with a stylized flourish extending to the right.

MEMORANDUM

TO: Larry Gobrecht

FROM: Bob Kuhn

DATE: January 7, 1991

RE: National Register evaluation for Hudson River State Hospital

The main building at the Hudson River State Hospital received National Historic Landmark designation in 1989 as the first significant example in the United States of the High Victorian Gothic style applied to institutional construction. Designed by Frederick C. Withers, the hospital represents the culmination of the Gothic Revival, and was a mature work that established Withers' reputation as one of its finest practitioners. The hospital grounds also represent the talents of one of America's greatest landscape architects, Frederick Law Olmsted.

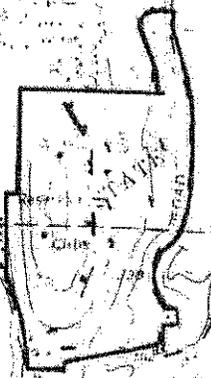

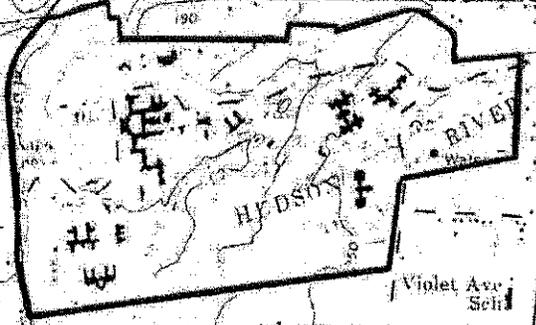

Staff have identified two National Register eligible districts on the grounds of the Hudson River State Hospital, including 1) the 1871 main building and surrounding complex and 2) the eastern complex of buildings including Hillcrest and Cleveland Home (see attached maps). The first district includes those support buildings and hospital grounds contiguous to the main edifice that retain integrity and recall the growth and development of the institution from its creation in 1867 through the 1930's. In addition to the NHL designated main building, the district includes the following categories of significant contributing resources: 1) The nineteenth century support buildings associated with Withers' original design for the hospital, 2) The intact remnants of the Olmsted designed landscape including the curvilinear road pattern, trees, and rolling, open topography that characterize the grounds surrounding the main building, 3) The later buildings dating to the turn-of-the-century and early twentieth century (pre-1941). Most of these buildings were constructed of brick, to complement the main building, and are historically significant for their association with the growth and development of the hospital during the early twentieth century. A number, including the library, pilgrim home, amusement hall, and Catholic chapel, are also architecturally significant as intact examples of the Colonial Revival, Classical Revival, and early English Gothic styles.

The second district, located to the east of the main hospital grounds and separated from it by modern residential and commercial development, also represents the expansion and development of the Hudson River State Hospital during the early twentieth century. The buildings in this district date from the

1910's, 1920's, and 1930's, and mirror the building trends occurring on the main hospital campus during these decades. The buildings are also architecturally significant for their Colonial Revival, Classical Revival, and early twentieth-century Eclectic design features.
